JOAQUÍN GOMENSORO

Electronic Engineering Student · Hardware & Software

Montevideo, Uruguay (UTC-3) · Open to remote | +598 98 047 918 | joaquin.gomensoro1@gmail.com | LinkedIn

SUMMARY

Third-year Electronic Engineering student at Universidad ORT with a solid software background: three years as a developer at Handy, a Uruguayan payments fintech, and current freelance full stack work. Hands-on with soldering, Arduino and PCB design, and at MoscaLabs I repair circuits and teach robotics. Looking for roles that combine hardware and software, such as embedded systems, IoT or test engineering. Native-level English.

EDUCATION

Universidad ORT Uruguay, Electronic Engineering — Expected 2029

- Currently in third year. Transferred after completing two years of Systems Engineering.

The British Schools of Montevideo, International Baccalaureate (IB) Diploma — 2019

- Full schooling in English, 2007 to 2019.

EXPERIENCE

Technical Support & Instructor, MoscaLabs — Jun 2026 - Present

Technology education for children · Montevideo

- Diagnose and repair circuits and equipment, and handle on-site technical support for any issue that comes up.
- Teach programming and robotics to children aged 5 to 12 in after-school programs and partner schools.

Software Developer, Handy — Sep 2021 - Aug 2024

Uruguayan payments fintech serving about 20,000 small businesses · Montevideo

- Built transaction alerting on AWS (CloudWatch, Lambda, SNS) that detected fraud and payment errors, classified each error by type and notified the person or team responsible for it.
- Designed severity-tiered alerts for the company website, so critical incidents triggered a distinct high-priority alarm instead of mixing with routine ones.
- Analyzed transaction data with SQL and Excel to understand normal behavior and spot anomalies, which became the basis for the alert rules.
- Later joined the front-end team, working with Angular, HTML and CSS alongside .NET and C++ services in a Scrum team.

Freelance Full Stack Developer — Jun 2026 - Present

Montevideo, Uruguay

- Sensitive-data back office for a health-sector client: access granted per record and per person and enforced with PostgreSQL row-level security; signed entries are immutable and every read is audited.
- Multi-tenant operations system for a field-services client, built around a server-computed pending-work board, with architecture decisions enforced by the linter.
- Stack: Next.js, React, strict TypeScript, Mantine, Supabase/PostgreSQL, Zod and Vitest, with CI on GitHub Actions and documented architecture decisions (ADRs).

PROJECTS

WhatsApp Personal Finance Assistant — Personal project, in daily use

- Chat bot that logs expenses and income from text or voice messages, using the Claude API to interpret natural language. Runs 24/7 on n8n in Docker on an Oracle Cloud VM, with the WhatsApp Cloud API and Google Sheets as storage.
- Tracks credit card installments per card billing cycle and sends automatic monthly reminders.

SKILLS

Electronics: Soldering, circuit diagnosis and repair, Arduino and its ecosystem of sensors and modules, PCB design in Autodesk Fusion
Programming: C++, TypeScript, JavaScript, SQL, .NET
Web & cloud: React, Next.js, Angular, PostgreSQL, AWS (CloudWatch, Lambda, SNS), Docker, n8n, Git
Practices: Scrum, continuous integration, automated testing

LANGUAGES

Spanish (native) · English (native-level, fully bilingual)

OTHER

Produce the Instagram content for a rural real estate agency (instagram.com/gomensoropropiedades). Rock climbing.
